WELCOME

The ability to control fire was a dramatic change in the development of humanity. Among many things it provided warmth, light and security. We believe this base connection still exists and is the reason why we still desire to use the fireplace as the central focal point of our living space.

The Vision Trimline range has been designed with the specific purpose of recreating that instinctive connectivity with nature.

Our innovative fires are skilfully engineered to allow a trimless aspect with no distracting frames or visible workings, just fire. These highly efficient beautifully designed appliances are available in a variety of different sizes and can be positioned in virtually any part of your home.

TL70SL

With an innovative, versatile design the compact TL70SL is easy to install and simple to service. The TL70SL can be wall mounted and installed directly to any internal outside facing wall.

One of the biggest advantages is that there is minimal building work required and with an output of 3.8kW and an impressive efficiency rating of B, the TL70SL will fit perfectly with virtually all interiors with sleek lines for a contemporary living statement.

The TL70SL utilises the same features as the other appliances within the range. The TL70 is remotely operated and to alleviate the need for batteries a mains adaptor is supplied as standard.

TL70SL RADLEY SUITE WITH SHELF

TL70SL WITH INTEGRATED HEAT BOX

When the TL70SL is installed with our new bespoke Integrated Heat Box (IHB) it allows you to construct the installation from combustible materials making the fire a versatile choice in most modern building applications.

The use of the integrated heat box allows the appliance to be installed in situations where combustible surfaces or materials would or may hinder the installation given the risk of heat and allows quicker access for service and maintenance.

WHAT'S INCLUDED:

- Easy to install & simple to service
- Can be fitted with the use of combustible materials* when installing with the Integrated Heat Box
- Slimline appliance only 155mm depth
- Can be wall mounted or installed within a suite
- Can be installed directly to any internal outside facing wall
- Energy class B – 84% efficient
- Can be installed into a cavity wall
- Realistic log effect
- Comes complete with mains adaptor

*Please refer to installation instructions when fitting with or without the Integrated Heat Box.

TOPAZ

TECHNOLOGY

EVERYTHING YOU NEED IN ONE PACKAGE

Ecomax remote control

The sleek designed handset features a thermostatic control countdown timer to automatically turn off the fire, and an Ecomax button, allowing adjustment of the flames to regulate room temperature resulting in a 40% energy saving.

Adjustable legs

Allowing you to easily install the fire at your desired height without the need for further, unnecessary building work.

Control access door

A neat, gloss finish, access system to allow access to the manual fire controls.

Convection vents

Two of these are supplied with each fire to allow convected hot air from the chimney into your room.

DOUBLE BURNER (DB) FEATURE

With the exception of the TL38, TL60CF, TL85RD and selected Gemstone models with burning logs, all other Vision Trimline fires are equipped with an innovative double burner system. This clever feature staggers the flame pattern in two rows and gives an extra sense of depth and realism whilst offering a more economical way to use your fire. At the touch of a button the front burner row remains active whilst the rear burner row diminishes, giving unparalleled visual effect with a reduction of 40% of the heat output. Used in combination with the Ecomax remote control can result in the benefit of reduced running costs of up to 60%.

GO WI-FI FOR MAXIMUM CONTROL

Introducing the latest optional upgrade option for Vision Trimline fires, the Myfire app uses wireless technology that connects the fire to your home Wi-Fi network. You can now take control using your smartphone or tablet with features such as:

- Temperature adjustment and thermostatic control
- Flame pattern adjustment and animated wave profiles
- Individual user profiles
- Countdown timer
- Weekly programming

ANTI-REFLECTIVE GLASS

Anti-reflective glass (ARG) which is available on many Vision Trimline models is a premium feature that allows you to maximise your experience of the beautiful flames giving the appearance of an open fire whilst having the convenience of a gas appliance. This clever feature gives the illusion that there is no glass between the fire and you, creating an even more authentic experience.

BURNING LOGS TECHNOLOGY

Available on TL55, TL64, TL83, and selected Gemstone models, the burning logs technology recreate the most authentic, realistic looking flame ever. Combined with high definition, ultra realistic ceramic logs, this innovate feature creates a fire so realistic it cannot be distinguished from a natural, living fire. For the ultimate in warm ambiance, the optional LED glowing fuel bed creates a subtle, relaxing impression of gently burning embers.

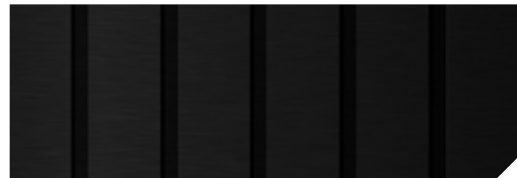

INTERIOR STYLING & FUEL BED OPTIONS

For that extra WOW factor, why not choose to upgrade to a black mirrored glass lining for your fire chamber and add a reflection to the fuel bed and flames to give a remarkable effect of added depth and detail. If burning logs is not the look you are going for, then perhaps you would be more interested in an alternative fuel bed for your fire. The collection features a range of stunning options to choose from.

TL70SL UPGRADE OPTIONS

For that extra WOW factor, there is also an option to upgrade to a black glass lining within the combustion chamber which offers a remarkable effect of added depth and detail. Other available upgrades also include Wi-Fi, vermiculite interior lining and alternative frame options.

BLACK GLASS UPGRADE

VERMICULITE BRICKS UPGRADE

FLUE SYSTEMS

All Vision Trimline fires (excluding the TL60CF) use a specialised double wall concentric flue system. The Holetherm system is an obligatory and integral part of the complete combustion system and must be used when installing the fire. concentric flue is made of high quality 0.5mm thick stainless steel AISI 316 inner and AISI 304 outer-liner.

A wide range of flue/chimney components allows for easy installation when terminating through the wall or the roof in an existing chimney or a dedicated fabrication. Please consult your nearest dealer for more details. The Holetherm system is approved according to CE in combination with all Vision Trimline balanced flue gas fires.

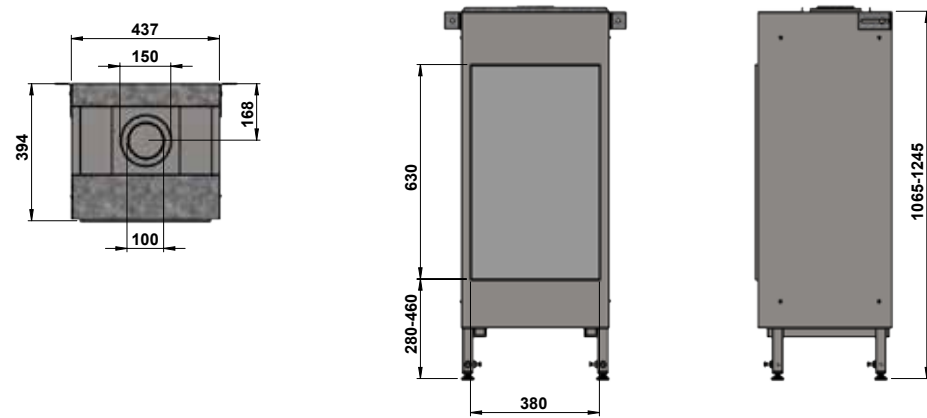

New to the Vision Trimline range is the DECO concentric flue system, for use with the Gemstone Series. Elegant connecting pipes with no visible locking bands available in black coated stainless steel. Both the design and ease of installation are of a very high standard. The connection of the various sections and elements is carried out by means of a click connection with the cam spring. Turn the flue to the correct position and when you hear the "click" it is already securely attached. It has never been so easy to quickly install a beautiful connecting pipe!

The DECO system is the first and only system that works with this unique click connection and is made of high-quality stainless steel material and is resistant to high temperatures and flue gases.
